

## IN THE CLAIMS

Please add claims 75-99. The following is the status of the claims in this application:

1-73. (Cancelled)

74. (previously presented) A method of regulating access to electronic content, the method comprising:

collecting notification information from a recipient of electronic content in response to an attempt to access the electronic content;

transmitting the collected notification information to an address other than that of an immediate sender of the electronic content; and

selectively controlling access to the electronic content based on a result of the transmission of the notification information.

75. (new) A method for acquiring information, comprising the steps of:

transmitting electronic data having computer executable instructions to a first computer; and

receiving notification information in response to the execution of the computer executable instructions,

wherein the notification information is collected by executing the executable instructions when triggered by an event at one or more successive computers other than the first computer and the notification information is received at a network address other than a network address transmitting the electronic data.

76. (new) The method of claim 75, further comprising the steps of:
- communicating the electronic data to the one or more successive computers;
  - transmitting the collected notification information to a network address other than the network address of the first computer; and
  - executing the computer executable instructions at the one or more successive computers when triggered by the event.
77. (new) The method of claim 75, further comprising the step of matching an identifier in the notification information with an identifier in a table to compute a charge.
78. (new) The method of claim 77, wherein the charge is a usage charge.
79. (new) The method of claim 77, wherein the identifier is at least any one of a user identifier that created the electronic data, an address receiving the notification information, an identifier of the electronic content, and an address specified when the electronic data was created.
80. (new) The method of claim 75, wherein the electronic data comprises at least any one of an envelope and one or more files.
81. (new) The method of claim 75, wherein a portion of the electronic data includes electronic content other than the executable instructions.

82. (new) The method of claim 81, wherein the executable instructions denies access to the electronic content until the collected notification information has been transmitted the network address other than the network address transmitting the electronic data.

83. (new) The method of claim 82, wherein the executable instructions selectively denies access to a part of the electronic content.

84. (new) The method of claim 81, wherein the electronic content includes at least any one of a text file, a graphics file, an audio file, a video file, an instruction file, and a program file.

85. (new) The method of claim 75, wherein the event is one of:

- (i) an attempt by a user to access the electronic data;
- (ii) an attempt by a user to save the electronic data;
- (iii) an attempt by a user to delete the electronic data; and
- (iv) an attempt by a user to list the electronic data.

86. (new) The method of claim 75, wherein the notification information includes user information collected by querying a user for personal information.

87. (new) The method of claim 75, wherein the notification information at least in part includes one of market data and demographic data.

88. (new) The method of claim 75, further comprising prompting for user identification at the one or more successive computers.

89. (new) The method of claim 88, further comprising granting access to at least a portion of the electronic data based on the user identification.

90. (new) A method for assessing fees, comprising the steps of:

- receiving electronic data having at least in part computer executable instructions from a sending computer;
- transmitting the electronic data and executable instructions to one or more successive computers; and
- executing the computer executable instructions at the one or more successive computers and upon receipt of an authorized user identifier at a network address other than a network address of the sending computer, granting access to at least a portion of the electronic data.

91. (new) The method of claim 90, further comprising updating information based on the authorized user identifier.

92. (new) The method of claim 91, wherein the updating information is a usage charge.

93. (new) The method of claim 90, further comprising the step of obtaining user information when the computer executable instructions are executed.

94. (new) The method of claim 93, wherein the user information includes at least any one of a personal information, a market information, and a demographic information.

95. (new) The method of claim 93, further comprising the step of computing a charge when the user information is received at a network address other than a network address of the sending computer.

96. (new) The method of claim 95, wherein the user information includes at least any one of a personal information, a market information, and a demographic information.

97. (new) The method of claim 90, further comprising denying access to at least part of the electronic data until user information is received at the network address other than the network address of the sending computer.

98. (new) The method of claim 90, wherein the electronic data is transmitted by a server.

99. (new) The method of claim 90, further comprising encrypting at least a part of the electronic data.
